

Filo Takip — Setup Guide

Prepared for New Hotel | 4 computers | Version 1.8.0

Filo Takip ("Fleet Tracking") is a Windows desktop application for managing your rental vehicle fleet — vehicles, daily overview, documents, appointments, analytics, and customers. It stores data locally on each computer and includes automatic update checks. The interface is available in Turkish, English, and Bosnian (switch anytime via the  button, top right).

1. DOWNLOAD

Download the installer on each of the 4 computers:

Download Filo Takip Setup (.exe)

Direct link: <https://github.com/eastmarketingba-sys/Filo-takip/releases/download/v1.8.0/Filo-Takip-Setup-1.8.0.exe>

2. INSTALL

- 1. Run the downloaded **Filo-Takip-Setup-1.8.0.exe**.
- 2. Choose an install location (or keep the default) and finish the wizard.
- 3. A desktop shortcut is created automatically.
- 4. Launch Filo Takip.

3. ACTIVATE

On first launch, the app will ask for an activation code. An internet connection is required at this step. Use **one code per computer** — each code below is valid for exactly one machine and locks to it once entered.

Computer	Activation Code
PC 1	FILO-B8VF-36R6-LG2H
PC 2	FILO-V42Q-SJ5J-5SX6

PC 3	FILO-FENE-X4RJ-5JLP
PC 4	FILO-EAQ7-4WCA-X62M

Important: a code cannot be reused on a second computer once it has been activated — it will show an "already used" error. If a computer is later replaced, reformatted, or a code was mistyped into the wrong machine, contact us and we'll reset that code so it can be re-activated on the correct computer.

4. UPDATES

Filo Takip checks for updates automatically. You can also check manually any time from the profile menu (top right) → **Güncelle / Update**.

NEED HELP?

If a code doesn't activate, a computer changes, or you run into any issue during setup, just reply to this email and we'll sort it out.
